1 Linear Algebra

Sherman-Morrison formula:

$$(A + uv^{\top})^{-1} = A^{-1} - \frac{A^{-1}uv^{\top}A^{-1}}{1 + v^{\top}A^{-1}u}$$
 (1)

$$(A + UCV)^{-1} = A^{-1} - A^{-1}U \left(C^{-1} + VA^{-1}U\right)^{-1} VA^{-1}$$
 (2)

2 Caculus

Leibniz integral rule:

$$\frac{d}{dx}\left(\int_{a(x)}^{b(x)} f(x,t)dt\right) = f(x,b(x)) \cdot \frac{d}{dx}b(x) - f(x,a(x)) \cdot \frac{d}{dx}a(x) + \int_{a(x)}^{b(x)} \frac{\partial}{\partial x}f(x,t)dt$$
(3)

Grönwall's inequality from two useful references [1, 2].

$$f(x) \ge a(x) + b(x) \int_{\underline{x}}^{x} f(u)du, x \in [\underline{x}, \bar{x}]$$
(4)

$$\implies f(x) \ge a(x) + b(x) \int_{\underline{x}}^{x} a(u) \exp\left(\int_{u}^{x} b(s) ds\right) du, \quad x \in [\underline{x}, \overline{x}] \qquad (5)$$

Grönwall's inequality in differential form:

$$f'(x) \le b(x)f(x) \tag{6}$$

$$\implies f(x) \le f(\underline{x}) \exp\left(\int_x^x b(s)ds\right)$$
 (7)
